Customer Problem Statement

Problem Statement	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	An employee or end user requiring licensed software	Submit a software request with complete and correct information	The request may be missing software, version, business justification, or device details	Software requests may arrive through different channels without a standardized form	Uncertain whether my request contains all required information
PS-2	A requester who has submitted a licensed software request	Track the progress and current status of my request	I may not know whether the request is pending approval, license validation, or installation	There is limited visibility into the request lifecycle	Confused and uncertain about when my software will be installed
PS-3	A Software Fulfillment Team member	Receive and process software requests efficiently	Requests may require manual license checking, approval verification, assignment, and installation	Request details, approvals, license checks, and fulfillment activities are not automatically connected	Delayed and burdened with manual work

Define the Problem Statement

 USER	 PROBLEM	 NEED	 IMPACT
Employees and end users requesting licensed software such as Microsoft Visio, Adobe Acrobat Pro, AutoCAD, or MATLAB.	Licensed software requests may be handled through unclear or unstructured processes, leading to missing information, approval delays, and manual license checks.	A guided ServiceNow-based software request process that captures complete request information, checks license availability, automates approval, and creates fulfillment tasks.	Incomplete or unclear software requests can cause delays in approval, license assignment, installation, communication, and request closure.

HOW MIGHT WE?

How might we provide employees with a simple and centralized ServiceNow experience that captures complete licensed software request information and automates license validation, approval, fulfillment, and status tracking?
