

Requirement Analysis

Data Flow Diagram & User Stories

Date	9 September 2026
Student Name	Laxmi Sai Priyanka
Project Name	Licensed Software Installation Request Management
Maximum Marks	

Logical Data Flow

Step	Flow
1	Employee opens the Service Portal and selects the Licensed Software Installation Request service.
2	Employee opens the software installation catalog item.
3	Catalog variables collect software name, requester details, priority, business justification, and required information.
4	UI policies and validations display relevant fields and validate the request before submission.
5	Employee submits the request and the system creates the request record and associated catalog task data.
6	Workflow Studio starts the automated approval process based on the configured request conditions.
7	Approval is routed to the appropriate approver; approval-required notifications are generated.
8	After approval, a software installation task is assigned to the Software Support Team for fulfillment.
9	The Software Support Team completes the installation task and the requester receives completion/status notification.

Licensed Software Installation Request - Data Flow Diagram

Flow: Employee → Service Portal → Catalog Request → Validation → Approval → Software Team → Completion

Flow: Employee → Service Portal → Catalog Request → Validation → Approval → Software Team → Request Completed

User Stories

User Type	User Story	Acceptance Criteria	Priority
Employee	Find licensed software request service.	Service is visible in the Service Portal.	High
Employee	Enter software request details.	Required variables are available and validated.	High
Employee	Submit software installation request.	Request record is created successfully.	High

Approver	Review and approve/reject request.	Approval decision is recorded and workflow proceeds correctly.	High
Software Support Team	Receive and complete installation task.	Task is assigned and completion can be recorded.	High
Requester	Receive request/approval/completion notifications.	Relevant notifications are generated at configured stages.	High
Admin	Maintain catalog, workflow, notifications, and configuration.	Configuration is editable by authorized administrator.	Medium

Requirement Summary

The system is designed to provide a controlled ServiceNow process for requesting licensed software. The solution combines a Service Catalog item, configured variables and validations, approval automation, software-team fulfillment tasks, notifications, SLA/service configuration, testing, and deployment documentation.
